

# SUPPLIER PROFILE:

## Caleffi — a worldwide leader in hydronics solutions

Caleffi does one thing worldwide — we manufacture and market innovative components for residential and commercial hydronic applications. Period! Our wide array of valves, manifolds, air separators, air vents, hydraulic separators and other related components allow for the precise control and handling of flow, pressure and temperature in hydronic heating and cooling systems. We proudly leverage more than 45 years of industry experience, assuring that our products will exceed your need for durability, technical accuracy and ease of installation.

### Leadership

The multi-national Caleffi group is a world leader in hydronic component manufacturing. Since 1961, the company founded by Franco Caleffi has been known for quick decision making, development of leading-edge technology and steady improvement in the quality of design. The group now has four manufacturing plants in Italy.

### Manufacturing

Caleffi's ultra-modern factories occupy 800,000 square feet of space. Key manufacturing stages include the robotic machining of brass and stainless steel bars into individual components, highly automated forging and hot stamping operations and automated injection molding of engineered plastic components. Every part is rigorously inspected and tested.

### Globalization

Caleffi products are sold in more than 50 countries and operate through local branches. In 2002, Caleffi North America, Inc., headquartered in Milwaukee, Wis. was opened to serve the United States, Canada and Mexico. In 2004, Caleffi delivered 50 million finished products to its customers worldwide.

### Innovation

It's a way of life. Our R&D program is

recognized worldwide for its vision, development of state-of-the-art technology and responsiveness.

### Customer care

We strive to exceed customer expectations, not merely to meet them. That requires steadfast attention to detail, advanced hydronic technology and incomparable technical assistance.

### Responsibility

Because our products are used in homes and in public places, we take very seriously the need for absolute safety. We accept responsibility for the well-being of all whose lives touch Caleffi products and technology: wholesalers, engineers, installers, building owners and homeowners. In our opinion, business success, comfort, safety and quality of life are all intertwined.

### Quality

We believe that imperfect products are unacceptable. It's our quality policy to check every single product. Our products are certified by more than 21 different authorities in both North America and Europe, meeting the highest international standards. Our factories are ISO 9001 certified.

### Credibility

We keep our promises because we only promise what we know we can deliver. This applies to product development, manufacturing, shipment and after-sales assistance.

*Hot Rod Rohr, owner of Show Me Radiant Heat, Rogersville, Mo., assembles a series of circulators on a Caleffi HydroLink manifold. The HydroLink, which greatly simplifies primary/secondary piping — is attached to hydronic heating systems to permit different heat adjustments for separate, multiple zones when there is only one boiler. "The HydroLink provides a low pressure loss zone, enabling both primary and secondary circuits to be independent of one another," said Rohr. "The unit prevents interference between the boiler circulator and whatever zone circulators are operating."*
